SECTION 01

Executive Summary

A purpose-built application for Multicorp Fire Protection Services to maximize technician productivity, eliminate profit leaks, and streamline operations.

TechForce Pro is a web-based workforce management platform designed specifically for Multicorp Fire Protection Services. It brings together scheduling, profit tracking, job management, and invoicing into a single system tailored to fire protection operations.

\$78,840

BUILD TIMELINE

What This Platform Does

 **Profit Scheduling Engine**

AI-powered scheduling that assigns techs by certification (extinguisher, suppression, sprinkler), location, and profit margin. Cuts shop days by 75%.

 **Job Management**

Custom job statuses with AI icons, return tracking, reschedule workflows with follow-up confirmation. Full lifecycle management.

 **Customer Pricing**

Set custom pricing per customer per service. Restaurants, schools, commercial — each gets tailored rates that auto-populate on jobs.

 **Invoicing & Documents**

AI-powered document scanner + invoice generator with Multicorp branding. Custom templates with company logo.

Who Uses It

PORTAL	USERS	KEY CAPABILITIES
Manager / Admin	Owners, Office Managers	Full control: scheduling, pricing, profit dashboards, invoicing, employee management
Supervisor	Field Supervisors	Team schedules, job assignment, tech oversight, returns & reschedule approvals
Technician	Fire Protection Techs	Daily schedule, job status updates, time-off requests, utilization score
Customer	Client Facility Managers	Job history, upcoming inspections, invoices, service requests

Built for Multicorp

This platform understands fire protection: extinguisher inspections, suppression system maintenance, sprinkler testing, emergency exit light checks. It knows which techs hold which certifications and never mis-schedules a job. Every feature is designed around how Multicorp actually operates — from restaurant hood systems to school district inspections.

SECTION 02

About Multicorp Fire Protection Services

A decade-plus leader in fire protection across the East Coast.

COMPANY PROFILE

Multicorp Fire Protection Services is a full-service fire protection company headquartered in Columbia, Maryland. For over a decade, they have provided high-quality inspection, testing, service, and repair for fire protection systems across the East Coast.

Corporate Office: 9693 Gerwig Lane,
Columbia, MD 21046

Operations: 431 Eastern Blvd, Essex, MD
21221

Phone: (410) 876-5000 · (800) 876-2063

Service Area: MD, VA, DC & East Coast

CORE SERVICES

- **Fire Extinguishers** — Inspection, testing, recharging, replacement
- **Suppression Systems** — Restaurant hood systems, clean agent, wet chemical
- **Sprinkler Systems** — Inspection, testing, maintenance, repair
- **Emergency Exit Lights** — Inspection, battery testing, replacement
- **24/7 Emergency Services** — Available around the clock

Facilities Served

Restaurants

Hood suppression systems, extinguishers, semi-annual inspections required by State Fire Marshal. Gas stoves, ovens, broilers, oil fryers.

Schools & Education

500+ educational facilities in the Baltimore area. Students, parents, faculty safety. NFPA compliance.

Commercial Buildings

Office spaces large and small. Emergency procedures, fire safety systems for all tenants and visitors.

Fleet / Transportation

Fire protection systems in commercial vehicles. Regulatory compliance for fleet fire equipment.

Group Homes

Full inspections, testing, repairs for residential group homes. Safety for all residents.

Condominiums

Multi-tenant building fire safety. Working sprinklers, extinguishers, exit lights for all units.

Why TechForce Pro?

Multicorp's service range — from restaurant hood systems to 500+ school district inspections — requires a platform that understands different inspection types, certification requirements, and scheduling complexity. Generic tools like Service Fusion don't account for profit-per-tech or fire protection-specific certification matching. TechForce Pro is built from the ground up for this exact workflow.

SECTION 03

Platform Overview: TechForce Pro

How every module connects to create a complete workforce management system.

System Architecture at a Glance

Core Modules

MODULE	PURPOSE	IMPACT
Profit Engine	Track revenue per tech, cap shop days by salary & margin, show ROI dashboards	\$59K+/yr savings
AI Scheduler	Auto-assign techs to jobs by cert + proximity + utilization. Nightly optimization run.	90%+ utilization
Job Manager	Custom statuses, return tracking, reschedule workflows, priority-based open jobs	Zero missed returns
Invoicing	Custom templates with Multicorp logo, auto-generate from completed jobs	Faster billing
Customer Pricing	Per-customer, per-service pricing. Auto-populate on new jobs.	No pricing errors

SECTION 04

Manager / Admin Portal

Full operational control — scheduling, pricing, profit tracking, invoicing, and employee management.

The Manager portal is the command center. Everything flows through here — employee setup, customer pricing, schedule optimization, invoicing, and profit dashboards.

Dashboard

Profit Leak Meter

Real-time: "\$12,400 lost to shop days YTD. 28 days at current pace." See money lost in dollars, not percentages.

Team Utilization Board

Every tech's billable vs. idle time. Color-coded: green (90%+), yellow (80-89%), red (<80%). One glance = team health.

Revenue Tracker

MTD and YTD revenue by service type (extinguisher, suppression, sprinkler). See which services generate the most profit.

Open Jobs Queue

Unassigned jobs sorted by priority (High/Medium/Low). One-click assign or let AI auto-fill.

Key Manager Actions

- 01 **Add & manage employees** — Set name, role, salary, certifications (extinguisher/suppression/sprinkler), home ZIP, and the system auto-calculates their shop day budget.
- 02 **Add customers & set custom pricing** — Each customer gets tailored rates per service. ABC Restaurant pays \$450 for hood inspection; XYZ School pays \$300 for extinguisher rounds.
- 03 **Create & manage job status options** — Define statuses like "Completed," "Drop Off," "Private Job," "Emergency," etc. AI auto-generates an icon for each. Techs select from your custom list.
- 04 **Set open jobs with priority levels** — Jobs marked High/Medium/Low. Automatically assigned to techs on excess shop days (days beyond their calculated profit shop days).
- 05 **Emergency Schedule button** — Select an employee, press "Emergency Schedule," and the system pulls from open jobs by priority (High first) and assigns them instantly.
- 06 **Set invoicing templates** — Upload Multicorp logo, set company name, customize invoice layout. All generated invoices carry your branding.
- 07 **Approve reschedule follow-ups** — When a tech adds "requires follow-up" to a rescheduled job, manager must confirm it's done before the job can be rescheduled again.

SECTION 05

Supervisor Portal

Team oversight, job assignment, and field operations management.

Supervisors see everything their team does — all tech schedules, all job statuses, all returns — without the pricing and profit dashboards reserved for management.

Supervisor Capabilities

All Techs Schedule View

See every technician's daily/weekly schedule. Know who's on-site, who's in the shop, and who's on the way to a job.

Job Status Overview

Real-time view of all tech job statuses across the team. Filter by status: Completed, In Progress, Return, Reschedule, Emergency.

Return Section

All jobs marked "Return" or "Will Return" appear here. Stays in the return queue until the tech completes the job. Full visibility on outstanding returns.

Reschedule Section

Jobs set to "Reschedule" appear here. If a follow-up comment is required, supervisor can verify completion before the job gets rescheduled again.

Key Difference from Manager: Supervisors can assign jobs and monitor team performance, but cannot change customer pricing, employee salaries, or access profit/margin dashboards. They focus on **field operations**, not financials.

SECTION 06

Technician Portal

Everything a field tech needs: today's jobs, status updates, time-off requests.

T

Technician — Field View

Techs see their daily schedule, update job statuses from the field, and request time off. Clean, simple, mobile-friendly.

Daily Schedule

Each morning, the tech sees their full day laid out:

My Schedule — Tuesday, June 10

8:00 AM — ABC Restaurant (Hood Suppression Inspection)

2345 Main St, Columbia, MD · Contact: John Smith · (410) 555-0101

Status: **IN PROGRESS**

11:00 AM — Lincoln Elementary (Extinguisher Inspection x24)

890 School Ave, Baltimore, MD · Contact: Jane Doe · (410) 555-0202

Status: **PENDING**

2:00 PM — Metro Office Park (Sprinkler Annual Test)

456 Commerce Dr, Columbia, MD · Contact: Facilities Mgr · (410) 555-0303

Status: **PENDING**

Job Status Updates

Techs select from manager-defined status options. Each status has an AI-generated icon:

STATUS	ICON	WHAT HAPPENS
Job Completed		Job marked done. Revenue logged. Invoice auto-generated if enabled.
Drop Off		Equipment dropped off for service. Job stays open until pickup.
Return / Will Return		Copy added to Job Return section. Stays there until completed.
Reschedule		Moved to Reschedule section. Follow-up required before rescheduling.
Emergency		Priority flag. Supervisor & manager notified immediately.
Private Job		Logged separately. Manager visibility only.

Time-Off Requests

Tech picks a date → **Instant response:** "Approved" or "Denied: Utilization at 78%, below 85% threshold. You're scheduled for \$900 job at ABC Mall."

Shop Day Visibility

Each tech sees their utilization score ("You're 92% billable this quarter") and remaining shop day budget ("3 of 5 shop days used"). Transparency builds trust.

SECTION 07

Customer Portal

Give your clients visibility into their inspection history, upcoming services, and invoices.

Customers log in to see their service history, upcoming inspections, and invoices. Professional experience that builds trust and reduces "When are you coming?" phone calls.

Service History

Full log of all past inspections, repairs, and maintenance. Downloadable reports for their compliance records.

Upcoming Inspections

See scheduled services with date, time, and assigned tech. No more calling to ask "when's the next inspection?"

Invoices & Payments

View and download invoices branded with Multicorp logo. Payment status tracking.

Request Service

Submit a service request directly through the portal. Emergency requests flagged for immediate attention.

SECTION 08

Profit Engine & Shop Day Optimization

The math that saves Multicorp \$59,130 per year by cutting 75% of shop days.

180

SHOP DAYS LAST YEAR

\$438

AVG DAILY COST PER TECH

\$78,840

TOTAL PROFIT LOST

Shop Day Allocation Formula

Step 1: Daily Cost = (Salary + Benefits 30% + Overhead \$10K) ÷ 260

Step 2: Daily Margin = Client Bill Rate - Daily Cost

Step 3: Allowed Shop Days based on margin tier

Example – Suppression Lead (\$85K):

Daily Cost = (\$85K × 1.3 + \$10K) / 260 = \$463/day

Daily Margin = \$1,600 - \$463 = \$1,137/day

Allowed Shop Days = 2/year (too expensive to bench)

Shop Day Rules by Multicorp Role

ROLE	SALARY	BILL RATE	MARGIN/ DAY	SHOP DAYS	LOGIC
Suppression Lead	\$85K	\$1,600	\$1,137	2	Never benched unless client cancels.
Sprinkler Tech	\$70K	\$1,200	\$850	3	Specialized. Keep on billable work.
Extinguisher Tech	\$55K	\$900	\$625	5	Moderate margin. Some flexibility.
Helper / Apprentice	\$40K	\$500	\$262	12	Lower cost. Use for stocking & training.
Office / Admin	\$50K	\$0	-\$288	0	Non-billable. PTO only.

Auto-Decline Rules

✖ At 90% of Shop Day Limit

Used 90%+ of allowed shop days. No more approved until next year.

✖ Client Needs This Tech

A billable job requires this tech that day. Revenue beats bench time.

✖ Utilization Below 85%

Quarterly utilization already below threshold.
Must be billable.

✓ All Clear — Approved

Under limit, no conflicts, utilization on track. Shop day approved.

SECTION 09

AI Scheduling & Open Jobs System

Auto-assign by certification + proximity + profit. Fill excess shop days with open jobs automatically.

How the AI Scheduler Works

```
// Runs nightly at midnight

for each unscheduled_job in next_30_days:

    // 1. Match by certification
    candidates = employees.filter(
        e => e.certs.includes(job.required_cert)
        && e.isFree(job.date)
    )
    // Extinguisher job → only extinguisher-certified techs
    // Suppression job → only suppression-certified techs
    // Sprinkler job → only sprinkler-certified techs

    // 2. Rank: fewest shop days left + closest to job
    candidates.sort(
        (a, b) => a.shop_days_remaining - b.shop_days_remaining
        || distance(a.home_zip, job.address)
        - distance(b.home_zip, job.address)
    )

    // 3. Assign top candidate
    if (candidates.length > 0)
        assign(candidates[0], job)
    else
        flagRevenueRisk(job)
```

Open Jobs System

Priority-Based Open Jobs

Manager creates open jobs and sets priority:

PRIORITY	DESCRIPTION	AUTO-ASSIGN BEHAVIOR
HIGH	Urgent inspections, compliance deadlines	Assigned first when tech has excess shop days
MEDIUM	Routine inspections that can flex ± 1 week	Assigned after all HIGH jobs are filled
LOW	Non-urgent: truck stocking, admin tasks	Fill remaining gaps. Better than a shop day.

Key rule: These jobs don't need escorts or call-in ahead. When a tech has shop days beyond their calculated profit shop days, open jobs auto-fill those days.

Emergency Schedule

Emergency Schedule Button

Manager selects an employee → Presses "**Emergency Schedule**" → System pulls from open jobs by priority (HIGH first, then MEDIUM, then LOW) → Jobs assigned instantly to the selected employee.

SECTION 10

Job Management — Statuses, Returns & Reschedules

Every job is tracked from creation to completion with full status history.

Custom Job Statuses

The manager creates custom job status options. AI automatically assigns an icon to each status. Techs select from the manager-defined list when updating a job.

STATUS	ICON	BEHAVIOR
Job Completed		Job closed. Revenue logged. Invoice auto-generated. Removed from active list.
Drop Off		Equipment at shop for service. Job stays open. Shows in "Drop-Off" section.
Private Job		Visible to manager only. Logged separately from regular work.
Emergency		Priority flag. Instant notification to supervisor & manager.
Return / Will Return		Copy sent to Job Return Section . See below.
Reschedule		Sent to Reschedule Section . See below.

Manager can create additional custom statuses at any time. AI generates appropriate icons automatically.

Job Return Section

Return Tracking

When a tech changes job status to **"Return"** or **"Will Return"**:

1. A copy of the job is added to the **Job Return Section**
2. The job stays in the return queue **until the tech completes it**
3. Manager, primary user, and supervisor see **all techs' return jobs**
4. Return jobs cannot be forgotten — they persist until resolution

Reschedule Section

Reschedule Workflow with Follow-Up Confirmation

When a job is set to "Reschedule":

1. Job moves to the **Reschedule Section**
2. If the tech or manager adds a "Requires Follow-Up" comment →
3. The manager must **confirm that the follow-up is done** before the job can be scheduled again
4. This prevents rescheduling a job that still has unresolved issues

Example: Tech marks job "Reschedule" + "Need replacement parts ordered." Manager cannot reschedule until confirming: "Parts received & ready."

SECTION 11

Customer-Specific Pricing

Different clients, different rates. Set once, auto-populate everywhere.

How It Works

The manager/supervisor can add a customer and set prices for their products that are tailored to each customer. When a job is created for that customer, the correct pricing auto-populates.

Example: Multicorp Customer Pricing

CUSTOMER	FACILITY TYPE	EXTINGUISHER INSPECTION	HOOD SUPPRESSION SERVICE	SPRINKLER TEST	EXIT LIGHT CHECK
ABC Restaurant	Restaurant	\$35/unit	\$450	–	\$15/unit
Lincoln Elementary	School	\$25/unit	–	\$800	\$12/unit
Metro Office Park	Commercial	\$30/unit	–	\$1,200	\$15/unit
Sunrise Group Home	Group Home	\$30/unit	\$350	\$500	\$12/unit
Harbor Condos	Condo	\$28/unit	–	\$1,500	\$10/unit

Why Per-Customer Pricing Matters

Multicorp serves restaurants, schools, commercial buildings, group homes, and condos — each with different service needs and pricing. A school district with 500 buildings gets volume pricing. A single restaurant pays standard rates. The system ensures every invoice is accurate without manual price lookups.

SECTION 12

AI Document Scanner & Invoicing

Custom invoice templates with Multicorp branding + AI-powered document scanning.

Invoice Template System

The primary user sets the invoicing template with company name and logo. Every generated invoice carries consistent Multicorp branding.

Invoice Template Preview

SECTION 14

Technical Architecture

Modern, scalable web application built for reliability and speed.

Technology Stack

LAYER	TECHNOLOGY	WHY
Frontend	React + TypeScript + Tailwind CSS	Fast, responsive, works on any device
Backend	Node.js / Next.js API	Real-time updates, serverless scaling
Database	PostgreSQL + Real-time sync	Reliable, scalable, instant dashboard updates
Auth	Role-based (Manager/Sup/Tech/Customer)	Each portal sees only their data
Hosting	Cloud (AWS/Vercel)	99.9% uptime, auto-scaling
AI Engine	GPT-4 + custom rules engine	Smart scheduling, document scanning, icon generation

Database Schema (Core Tables)

TABLE: employees id PK name, role, salary VARCHAR/DECIMAL certs JSON [ext, supp, sprinkler] billable_rate, home_zip DECIMAL/VARCHAR allowed_shop_days INT (auto-calc) shop_days_used_ytd INT	TABLE: customers id PK name, facility_type VARCHAR address, contact_info VARCHAR custom_pricing JSON inspection_frequency ENUM
TABLE: jobs id PK customer_id FK → customers employee_id FK → employees job_type, status VARCHAR/ENUM priority ENUM (high/med/low) scheduled_date, revenue DATE/DECIMAL	TABLE: invoices id PK customer_id FK → customers job_id FK → jobs amount, status DECIMAL/ENUM template_id FK → invoice_templates generated_at TIMESTAMP

Security & Compliance

Role-Based Access

Manager sees everything. Supervisor sees team ops. Techs see their own schedule. Customers see their own service history.

Data Encryption

TLS in transit, AES-256 at rest. Employee salary data, customer pricing, and financial reports fully encrypted.

SECTION 15

Development Timeline 1—2 Months

Four sprints from kickoff to production deployment.

Sprint Breakdown

■ Sprint 1 — Foundation (Week 1–2)

Deliverables:

- User authentication + role-based access (Manager, Supervisor, Tech, Customer)
- Employee management: add techs, set salary, certifications, home ZIP
- Customer management: add clients, set facility type, contact info
- Customer-specific pricing setup
- Basic dashboard layout with Multicorp branding

Milestone: Manager can log in, add employees + customers, and set pricing.

■ Sprint 2 — Scheduling & Jobs (Week 3–4)

Deliverables:

- Job creation with custom statuses + AI icon generation
- AI Scheduler: cert-matching, proximity ranking, nightly auto-assign
- Open Jobs system with High/Medium/Low priority
- Emergency Schedule button
- Tech portal: daily schedule view, job status updates

Milestone: Techs see their daily schedule. AI auto-assigns jobs. Emergency schedule works.

■ Sprint 3 — Profit Engine & Job Tracking (Week 5–6)

Deliverables:

- Profit Engine: daily cost calculation, margin-based shop day limits
- Shop Day Tracker with auto-approve/deny rules
- Job Return section + Reschedule section with follow-up confirmation
- Supervisor portal: team view, all returns, all reschedules
- Profit Dashboard: per-employee ROI, revenue by service type

Milestone: Profit dashboards live. Shop day auto-deny working. Returns tracked.

■ Sprint 4 — Invoicing, Polish & Launch (Week 7–8)

Deliverables:

- Invoice template system with Multicorp logo + branding
- AI Document Scanner for inspection reports
- Customer portal: service history, upcoming inspections, invoices
- "What-If" scenario planner for managers
- Final QA, performance optimization, production deployment

Milestone: Full platform live. All 4 portals working. Invoicing active.

Timeline Summary

Week 1-2	Foundation + Auth + Employee/Customer Setup
Week 3-4	AI Scheduling + Jobs + Tech Portal
Week 5-6	Profit Engine + Returns + Reschedules
Week 7-8	Invoicing + Customer Portal + Launch

SECTION 16

Next Steps

Let's build TechForce Pro for Multicorp Fire Protection Services.

Immediate Action Items

- 01 **Review this blueprint** — Confirm features, priorities, and any additions or changes.
- 02 **Confirm Multicorp-specific data** — Current employee count, certification breakdown, top 10 customers, and current pricing structure.
- 03 **Sprint 1 kickoff** — Begin foundation build immediately upon approval.
- 04 **Weekly demos** — Every Friday, a live demo of what was built that sprint. Your feedback drives the next sprint.

Question for the Client

Would you like us to add a Mobile App to TechForce Pro?

The current blueprint covers a fully responsive web application that works on phones, tablets, and desktops. If you'd like a native mobile app (iOS/Android) for technicians in the field, we can scope that as a Phase 2 add-on after the web platform launches.
